This comprehensive history of linguistics is part of a 5 volume set. Together, the volumes examine the social, cultural and religious functions of language, its place in education, the prestige attached to different varieties of language, and the presentation of lexical and grammatical descriptions. They explore the linguistic interests and assumptions of individual cultures in their own terms, without trying to transpose and reshape them into the context of contemporary ideas of what the scientific study of language ought to be. The authors of individual chapters are all specialists who have been able to analyse the primary sources, and so produce original syntheses which offer an authoritative view of the different traditions and periods. Volume Two examines the Greek, Roman and Medieval European traditions, which between them developed the grammatical and syntactical models which form the basis of our inherited linguistic assumptions.

A comprehensive reference work: This looseleaf work is an authoritative compilation of methods for the detection of autoantibodies (Section A: Methods of Autoantibody Detection); the structure, function, and molecular and biochemical concepts of autoantigens (Section B: Autoantigens); and the clinical significance of measuring autoantibodies in patients with rheumatic, connective tissue and autoimmune diseases (Section C: Clinical Significance of Autoantibodies). This unique work brings together all the molecular and medical information - very difficult to retrieve otherwise - in ONE publication. The Editors and contributors are leading experts in the immunological, molecular biological, and clinical fields. The format of this looseleaf publication allows regular updating of data as well as inclusion of new advances in research on autoimmunity. Until now, the work (Basic work including Supplement 1) included Section A, and the larger part of Section B, both in an attractive and robust ringbinder. Audience: By nature and design of this exciting reference work, it is especially aimed at scientists, including immunologists, pathologists and molecular biologists, and clinical chemists, as well as clinicians specializing in rheumatic diseases and autoimmune disorders, inflammation or clinical immunology. Supplement 2: This supplement primarily contains Section C (Clinical Significance of Autoantibodies). As in the other sections, the contents are presented in a consistently structured manner, beautifully illustrated with photos and schematic figures. Extensive literature references are provided. Also, this supplement includes an addition to Section B (Autoantigens), being chapter B.1.5: The Antigens Defined by Antikeratin Antibodies (AKA).
