This book bridges the gap between ecotoxicology and limnology, offering an ecotoxicological perspective on lake management. The text describes eutrophication of shallow, temperate lakes, and examines the influence of toxic substances on the aquatic ecosystem, and proposes that nutrients like phosphorus are not the only important factor in explaining and managing eutrophication. Draws on a range of studies and experiments, some presented here for the first time.

This book covers applications of computational techniques to biological problems. These techniques are based by an ever-growing number of researchers with different scientific backgrounds - biologists, chemists, and physicists. The rapid development of molecular biology in recent years has been mirrored by the rapid development of computer hardware and software. This has resulted in the development of sophisticated computational techniques and a wide range of computer simulations involving such methods. Among the areas where progress has been profound is in the modeling of DNA structure and function, the understanding at a molecular level of the role of solvents in biological phenomena, the calculation of the properties of molecular associations in aqueous solutions, computationally assisted drug design, the prediction of protein structure, and protein - DNA recognition, to mention just a few examples. This volume comprises a balanced blend of contributions covering such topics. They reveal the details of computational approaches designed for biomolecules and provide extensive illustrations of current applications of modern techniques. A broad group of readers ranging from beginning graduate students to molecular biology professions should be able to find useful contributions in this selection of reviews.

What is there in developmental relationships beyond setting and striving to achieve goals? The presence of goals in coaching and mentoring programs has gone largely unquestioned, yet evidence is growing that the standard prescription of SMART, challenging goals is not always appropriate - and even potentially dangerous - in the context of a complex and rapidly changing world. *Beyond Goals* advances standard goal-setting theory by bringing together cutting-edge perspectives from leaders in coaching and mentoring. From psychology to neuroscience, from chaos theory to social network theory, the contributors offer diverse and compelling insights into both the advantages and limitations of goal pursuit. The result is a more nuanced understanding of goals, with the possibility for practitioners to bring greater impact and sophistication to their client engagements. The implications of this reassessment are substantial for all those practicing as coaches and mentors, or managing coaching or mentoring initiatives in organizations.

One of the most striking features of contemporary industrial economies is their ability to offer an ever-expanding and improving range of products. Personal computers, tiny pacemakers, digital watches, and VCRs simply did not exist, and were not even dreamt of, only a few decades ago. Such product innovations play an increasingly important role in modern economic growth, and it is therefore imperative that economists come to grips with them, just as they have done with traditional economic phenomena. In this skillfully crafted and imaginative study, Manuel Trajtenberg develops the tools to quantify and analyze the notion of product innovation. He argues persuasively that the magnitude of an innovation should be equated with the social benefits that it generates. Drawing from the "characteristics approach" to demand theory and the econometrics of discrete choice, he presents an ingenious method to estimate the benefits from product innovations that accrue to the consumer over time. His method centers on consumer preferences for different product attributes -such as speed and size of memory in computers-and then uses those preferences to evaluate the changes in attributes.

Trajtenberg applies his approach to the study of one of the most remarkable innovations in medical technology--Computed Tomography (CT) scanners. He assembled for that purpose an impressive set of data on every aspect of the new technology, from qualities and prices, patents and research, to details on virtually every sale in the United States during the decade following the introduction of CT in 1973. This close-up view of an innovation, quite rare in economic literature, offers valuable insights on the nature of the innovative process, the interaction between innovation and diffusion, the effects of uncertainty about quality, and the implications of changing preferences.

Free Radicals in Biology, Volume V covers the mechanisms for the generation of free radicals. This volume contains eight chapters that discuss the biology and chemistry of oxy-radicals in mitochondria and the radical-mediated metabolism of xenobiotics. The opening chapter describes the mechanisms of free radical production in enzymatically promoted lipid peroxidation, generally in microsomes or microsomal lipids. The subsequent chapters explore the biochemistry and biology of plant and animal lipoxygenases; the production of superoxide and hydrogen peroxide in mitochondria; and the biological role of these species in mitochondria and related systems. The discussions then shift to the effects of superoxide production in white blood cells, with an emphasis on an evaluation of the oxygen-dependent reactions of the important phagocytic cells, the monocytes, and the polymorphonuclear leukocytes. This volume further covers the formation and the role of oxy-radicals in the red blood cell, which is a very useful system for studying the protection of biological tissue against radical-mediated damage. A chapter presents a comprehensive review of the production of free radicals during the metabolism of xenobiotics. The last chapters provide an overview of the enzymology, biological functions, and free radical chemistry of glutathione peroxidase. These chapters also examine a number of gerontological principles and the effect of antioxidants in aging. Chemists, biologists, and physicists will find this book of great value.

Ecocriticism and the Idea of Culture: Biology and the Bildungsroman draws on work by Kinji Imanishi, Frans de Waal, and other biologists to create an interdisciplinary, materialist notion of culture for ecocritical analysis. In this timely intervention, Feder examines the humanist idea of culture by taking a fresh look at the stories it explicitly tells about itself. These stories fall into the genre of the Bildungsroman, the tale of individual acculturation that participates in the myth of its complete separation from and opposition to nature which, Feder argues, is culture ' s own origin story. Moving from Voltaire ' s *Candide* to Mary

Shelley's *Frankenstein* and from Virginia Woolf's *Orlando* to Jamaica Kincaid's *Lucy*, the book dramatizes humanism's own awareness of the fallacy of this foundational binary. In the final chapters, Feder examines the discourse of animality at work in this narrative as a humanist fantasy about empathy, one that paradoxically excludes other animals from the ethical community to justify the continued domination of both human and nonhuman others.

Analyzes approaches to the study of complexity in the physical, biological, and social sciences.

A Fiction Writer's Guide to Sex, Violence, Dead Narrators, and Other Challenges

Although fiction writers must concern themselves with "big picture" issues such as plot, theme, and character development, much of the day-to-day work of writing involves finding answers to seemingly minor questions: How should I describe the exterior of a house? How can I construct the voice of a historical narrator with authenticity? How should I depict a physically atypical character? Few books on the market address the problems and opportunities present in these and other questions, yet they are the ones that most writers grapple with on a daily basis. *Danger on the Page: A Fiction Writer's Guide to Sex, Violence, Dead Narrators, and Other Challenges* identifies and explores some of the more common and intractable situational challenges of fiction writing, with chapters grouped into the general subject areas such as scenes, characters, points of view, and settings. Shawver delves into the pitfalls and opportunities of writing about sex, violence, sports, and love; he examines writing from the perspective of a different race, gender, or species; he interrogates conventional beliefs about the use of brand names, the description of architecture, and the portrayal of nature. Throughout, he gives dozens of examples from both literary and commercial fiction so readers can borrow (or reject) other writers' techniques and explore the myriad challenges of fiction writing on their own. A lively and witty approach to a diverse range of specific writing issues, Shawver's book will appeal especially to intermediate-level writers seeking to bring their craft to the next level.

The *Czech Reader* brings together more than 150 primary texts and illustrations to convey the dramatic history of the Czechs, from the emergence of the Czech state in the tenth century, through the creation of Czechoslovakia in 1918 and the Czech Republic in 1993, into the twenty-first century. The Czechs have preserved their language, traditions, and customs, despite their incorporation into the Holy Roman Empire, the Habsburg Empire, the Austro-Hungarian Empire, the Third Reich, and the Eastern Bloc. Organized chronologically, the selections in *The Czech Reader* include the letter to the Czech people written by the religious reformer and national hero Jan Hus in 1415, and Charter 77, the fundamental document of an influential anticommunist initiative launched in 1977 in reaction to the arrest of the Plastic People of the Universe, an underground rock band. There is a speech given in 1941 by Reinhard Heydrich, a senior Nazi official and Deputy Reich Protector of Bohemia and Moravia, as well as one written by Václav Havel in 1984 for an occasion abroad, but read by the Czech-born British dramatist Tom Stoppard, since Havel, the dissident playwright and future national leader, was not allowed to leave Czechoslovakia. Among the songs, poems, folklore, fiction, plays, paintings, and photographs of monuments and architectural landmarks are "Let Us Rejoice," the most famous chorus from Bedřich Smetana's comic opera *The Bartered Bride*; a letter the composer Antonín Dvořák sent from New York, where he directed the National Conservatory of Music in the 1890s; a story by Franz Kafka; and an excerpt from Milan Kundera's *The Joke*.

Intended for travelers, students, and scholars alike, The Czech Reader is a rich introduction to the turbulent history and resilient culture of the Czech people.

The Spanish provinces of Castile, Leona, and Galicia were in upheaval. King Ferdinando, who until his death six years ago had reigned over these northern territories, had divided his kingdom amongst his three sons, bequeathing them a political muddle. Sancho, the eldest received Castile; Alphonso, the middle son, inherited Leona; and Galicia went to the third and youngest son, Garcia. The arguments between the princes began almost as soon as the funeral was over. Greed led to squabbles and distrust between the sons of Ferdinando. Pledged to Sancho, Rodrigo Ruy Diaz of Bivar - El Cid - soon founded his reputation as a warrior par excellence. He enjoyed the status of a legend even while he lived. Politics and power dictated his life, but not necessarily his need to love... Immortalised in ballad, play and film, the life of Rodrigo Ruy Diaz - El Cid - has fascinated storytellers through the centuries. Tender Warrior explores the possibility that El Cid would have loved the woman he chose for himself, rather than the woman politics chose for him.
