A must-read for radio communicators of any type. Highlights include: principles of ionospheric propagation, ionospheric

forecasting, unusual HF and VHF ionospheric propagation, and do-it-yourself propagation predictions and charts. Solar cycle predictions, sunspots and the sunspot cycle, along with stunning photography including the largest-ever solar flare in 1989. Home to the New York Yankees, the Bronx Zoo, and the Grand Concourse, the Bronx was at one time a haven for upwardly mobile second-generation immigrants eager to leave the crowded tenements of Manhattan in pursuit of the American dream. Once hailed as a "wonder borough" of beautiful homes, parks, and universities, the Bronx became--during the 1960s and 1970s--a national symbol of urban deterioration. Thriving neighborhoods that had long been home to generations of families dissolved under waves of arson, crime, and housing abandonment, turning blocks of apartment buildings into gutted, graffiti-covered shells and empty, trash-filled lots. In this revealing history of the Bronx, Evelyn Gonzalez describes how the once-infamous New York City borough underwent one of the most successful and inspiring community revivals in American history. From its earliest beginnings as a loose cluster of commuter villages to its current status as a densely populated home for New York's growing and increasingly more diverse African American and Hispanic populations, this book shows how the Bronx interacted with and was affected by the rest of New York City as it grew from a small colony on the tip of Manhattan into a sprawling metropolis. This is the story of the clattering of elevated subways and the cacophony of

crowded neighborhoods, the heady optimism of industrial progress and the despair of economic recession, and the vibrancy of ethnic cultures and the resilience of local grassroots coalitions crucial to the borough's rejuvenation. In recounting the varied and extreme transformations this remarkable community has undergone, Evelyn Gonzalez argues that it was not racial discrimination, rampant crime, postwar liberalism, or big government that was to blame for the urban crisis that assailed the Bronx during the late 1960s. Rather, the decline was inextricably connected to the same kinds of social initiatives, economic transactions, political decisions, and simple human choices that had once been central to the development and vitality of the borough. Although the history of the Bronx is unquestionably a success story, crime, poverty, and substandard housing still afflict the community today. Yet the process of building and rebuilding carries on, and the revitalization of neighborhoods and a resurgence of economic growth continue to offer hope for the future.

Today's digital cameras provide image data files allowing large-format output at high resolution. At the same time, printing technology has moved forward at an equally fast pace bringing us new inkjet systems capable of printing in high precision at a very fine resolution, providing an amazing tonality range and longtime stability of inks.

Moreover, these systems are now affordable to the serious photographer. In the hands of knowledgeable and experienced photographers, these new inkjet printers can help create prints comparable to the highest quality darkroom prints on photographic paper. This book provides the necessary foundation for fine art printing: The understanding of color management, profiling, paper and inks. It demonstrates how to set up the printing workflow as it guides the reader step-by-step through this process from an image file to an outstanding fine art print.

"Humans are plowing up meadows and bulldozing trees so they can grow corn or erect houses, shopping centers, gas stations and all kinds of human constructions that displace wildlife. Enter Hannibal, the wise old field mouse, who engineers a system to warn the animals of dangerous human activity. Hannibal's disciple, Arthur Mouse, is Hannibal's loyal foot soldier. At great danger from hawks, snakes, owls and a cat, Arthur takes books and materials from a ham radio operator so the mice can learn how to build their early warning radios."--P. [4] of cover.
